

To find out in more detail, let's ask ourselves these questions:

OK, but what was our goal here?

To minimize something?

Maximize?

What have we found to be optimal?

Did we get something for military operations? W

What do we mean by efficiency?

Did we find the number of soldiers, the number of weapons? What is the numerical value of efficiency?

Which of these 40 rows has the best solution set and how do I interpret it?
